

In Operations

Demand Forecasting, Inventory Optimization & Replenishment

JustEnough automates the entire SmartTrack® Forecasting-to-Replenishment process, optimizing inventory and generating orders back into the underlying transaction system for execution.

- Policy
- Promotions
- Pricing
- Events
- Supply Constraints

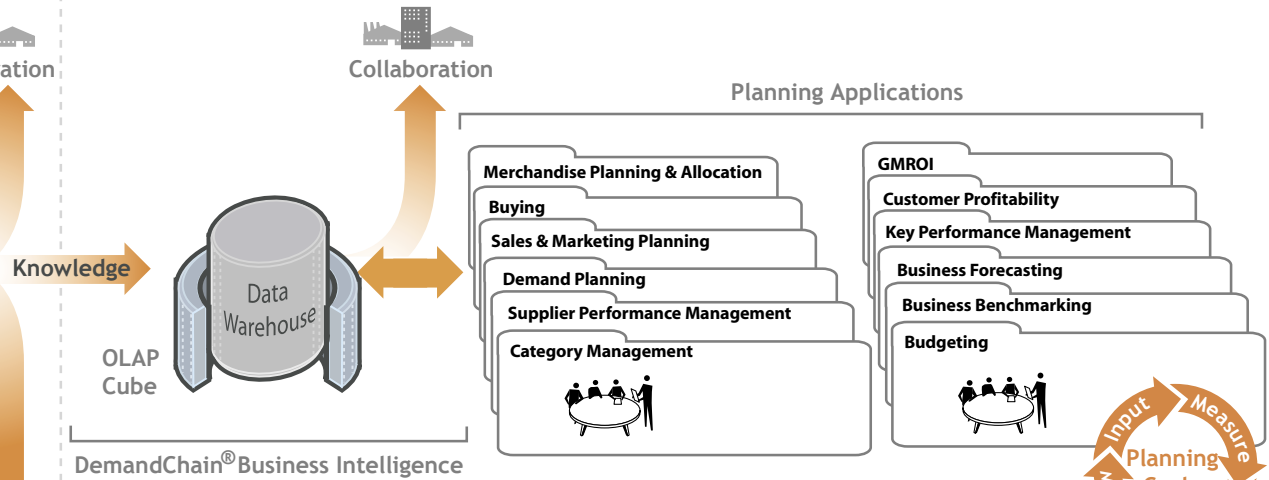

JustEnough uses sophisticated Forecasting technology to analyze transaction data, policy, promotion, pricing and supply information to create accurate Demand, Supply and Inventory Forecasts to the lowest levels of granularity.

In Planning

Performance Management

JustEnough's DemandChain® Business Intelligence leverages the latest in Data Warehouse & OLAP Cube technology to provide a range of Planning and Performance Management applications.

JustEnough converts raw transaction data into historic and forecast demand chain intelligence not available in the underlying transaction system. Resulting plans are integrated back into operations for execution and optimized through re-iterative Demand Management cycles.
